

Case Study

DAIMLER CHRYSLER SALTILLO PLANT GETS READY FOR ANYTHING

Problem defined.

In manufacturing, the future is flexibility. And Daimler Chrysler Mexico's Saltillo facility was getting ready for the future by exploring tool changers that could accommodate multiple vehicles and varying utility requirements while saving time and cutting costs.

Solution in reach.

Daimler Chrysler turned to Applied Robotics' Sigma series tool change system to meet its flexible automation needs. Known for its modularity, Applied Robotics' Sigma tool changer can be retrofitted with modules to accommodate different utilities regardless of future changes to the plant. Now, Daimler Chrysler is prepared to fully utilize the plant's real estate and manufacturing capabilities for the foreseeable future.
